BRIAN O'GRADY

Portland, OR • 503-985-8441 • loudmouthbrian@gmail.com • github.com/Strifewind

PROFESSIONAL SUMMARY

Versatile IT professional with over a decade of experience spanning automation engineering, infrastructure management, and systems support. Skilled in CI/CD pipeline development, containerization, infrastructure-as-code, and cloud platforms. Currently pursuing a Bachelor of Science in Computer Science while operating a personal Kubernetes cluster to deepen hands-on DevOps expertise. Seeking a DevOps Engineer or Junior Software Engineer role to leverage automation experience and continue growing as a software engineer.

EDUCATION

Bachelor of Science in Computer Science **Currently Enrolled**

Portland State University, Portland, OR *In Progress*

TECHNICAL SKILLS

- **Cloud Platforms:** AWS, Azure, Google Cloud Platform (GCP)
- **Containerization & Orchestration:** Docker, Kubernetes, container registries
- **CI/CD & Automation:** Jenkins, GitHub Actions, Ansible, automated deployment pipelines
- **Infrastructure as Code:** Ansible playbooks, configuration management
- **Scripting & Programming:** Python, Bash, PowerShell, Linux/Unix administration
- **Tools & Monitoring:** Git, ServiceNow, Tailscale, system diagnostics, performance monitoring

KEY PROJECTS

CI/CD Pipeline for Internal Tools & Testing

Designed and deployed automated code testing, containerization, and deployment pipeline *DevOps*

- Implemented Jenkins pipeline automating code testing, Docker containerization, and deployment to development environments
- Built and managed Docker containers from validated builds with private registry for staging and image storage
- Configured automated container deployment to dev environments for integration testing with manual approval gates
- Reduced deployment time and improved consistency across testing environments

Infrastructure Automation Toolkit

Developed comprehensive Ansible-based automation framework for server management *DevOps*

- Built Ansible playbooks and roles for server provisioning, configuration management, and patch deployment at scale
- Orchestrated hardware testing schedules using dynamic inventory and automated environment teardown
- Automated break-fix patching workflows, enabling rapid deployment of critical fixes with minimal downtime
- Standardized system configurations using Ansible templates, improving infrastructure reliability and reducing manual work

Personal Development Infrastructure (Homelab) **Currently Operational**

5-node NUC Kubernetes cluster with distributed architecture and CI/CD pipeline *Infrastructure Engineering*

- Architected and deployed a 24/7 operational 5-node Kubernetes cluster on Intel NUCs running Ubuntu, managing distributed container orchestration across the cluster

- Implemented secure remote access using Tailscale VPN with shared SSH key management across multiple devices for seamless development access
- Built private Git repository integration with Docker container automation for a personal CI/CD pipeline supporting automated builds and deployments
- Configured NAS-based persistent storage for data retention and high availability across distributed nodes and containerized services
- Developing an Ansible automation framework to codify infrastructure provisioning, cluster bootstrap, and container deployment workflows

PROFESSIONAL EXPERIENCE

Engineering Laboratory Technician **June 2022 – March 2024**
Intel *Hillsboro, OR*

- Executed Ansible automation scripts and configuration management tasks critical to testing operations and service updates
- Imaged systems using scripted PXE-based utilities to efficiently prepare test environments
- Deployed and maintained servers, including hardware upgrades and component replacements (CPU, RAM, PCIe cards, GPUs, accelerator cards)
- Performed firmware flashing, hardware diagnostics, and troubleshooting of failing components
- Tracked hardware assets using ServiceNow and managed a ticket-driven workload with self-directed execution

Automation Engineer **June 2018 – January 2020**
Cargo Sense *Remote*

- Supported development and scaling of an Elixir-based web application by integrating Docker and CI/CD automation tools
- Designed automated deployment and configuration workflows to improve reliability and reduce manual effort across customer environments
- Leveraged API tools and GraphQL queries to automate configuration changes and metadata updates across customer systems
- Installed and configured environmental monitoring equipment with automated data collection at customer sites

Engineering Lab Technician **February 2016 – June 2018**
Intel *Hillsboro, OR*

- Performed high-volume testing and quality assurance to support Intel's processor engineering operations
- Conducted preventive maintenance, repairs, and troubleshooting of lab testing equipment
- Collected, analyzed, and validated test data across thousands of units weekly to ensure accuracy and consistency

Systems Support Analyst **April 2014 – January 2015**
Power Home Remodeling Group *Chester, PA*

- Monitored system capacity and performance to ensure infrastructure stability across an enterprise environment
- Configured and managed enterprise device management solutions for macOS and Windows platforms
- Managed IT assets and provided technical support for a custom Ruby on Rails ERP system, ensuring minimal downtime
